## Fleeced Veneers

A continuous roll of timber edging strengthened with cellulose backing paper (fleece) and face-sanded to an even thickness. Manufactured by Consolidated Veneers in our Sydney factory, **Fleeced Veneer** is used throughout Australia and internationally for standard edging applications, soffforming and profile wrapping.

### Advantages

**Continuous roll form** – optimizes edgebanding speed whilst minimizing offcuts and wastage as experienced with short veneer strips.

**Staggered finger joints** – extra strength and near invisible joints.

**Fleeced** – strong cellulose backing eliminates splintering, splitting, cracking and breakage during edgebanding – no priming required.

**Face Sanded** – ready for lacquering after edgebanding.

**Original natural veneer** – no cheap substitutes from other species.

**Wide range** – over 40 species in stock.

**Australian Made** – all veneer edging is manufactured in Sydney, Australia.

### Application

**Fleeced Veneer** can be applied using a wide selection of equipment including hotmelt edgebanders, hot air edgebanders, ordinary household irons (for preglued stock), or by hand using contact adhesives.

Most edgebanders' trimming devices will cut **Fleeced Veneer** cleanly without difficulty.

**Fleeced Veneer** can also be trimmed easily using a sharp blade or handheld edge-trimmer.

For best results when applying unglued **Fleeced Veneer** edging, we recommend **EDGE BOND** granulated and cartridge hotmelts, available ex-stock from Consolidated Veneers.

### Range

**Fleeced Veneer** edging is available ex-stock from Consolidated Veneers or from one of our distributors in a range of sizes listed below:

|                             |   |
